The Drupal Common Framework (CFW)

The Common Framework (CFW) is a homegrown web-building tool that uses the Drupal content management system to power nine of our college websites, in addition to maricopa.edu—creating a cohesive user experience for navigation, search, menus, programs, degrees and certificates, and more.

We are on the third major release of this tool. There are several 'flavors' of the framework: the 'college' version, adding many student-specific tools (clubs, awards, programs, fields of interest); the department version (DFW), focusing on more specialized content; and the department public/private version (DFW-P) allowing for fully user authentication (using Azure AD) to create content that is public (anonymous users) and private (only authenticated users) on the same website.

Explore the Framework

Page Building Tools

From functional Basic Pages to marketing Landing Pages to News and Events, the CFW3 has the tools you need to convey your content to any audience. See what options are available on the various kinds of pages you can build.

Showcase Pages

The CFW3 is designed for function and form. When you need to not only organize content, but make it engaging and visually rich, the CFW3 can help. See some examples of high-performing pages that use CFW3 elements in creative ways.

Resources

The District Marketing Team has established Web Style Guides for all 10 colleges. In addition, we've built ~100 icons for your use in the Common Framework 3 (CFW3). Access these resources to help with your brand and your designs.

Feature Requests for the Framework

In collaboration with local college teams, District Marketing and ITS are always looking to make the CFW and DFW better! From new paragraph bundles to enhancements to existing functionality and features, the framework is an ever-evolving tool that strives to make the Maricopa Community Colleges web ecosystem more user-friendly and engaging for our users.

The Framework Knowledge Base

While this site visually presents the CFW3, District ITS also maintains an extensive knowledge base with hands-on instructions for every feature of the framework. Key topics in the knowledge base include:

Content Editing

Create and manage content on your website, including creating pages, adding accordions, displaying an image gallery, and much more.

Awards and Programs

Manage your college's FOI, program, and award pages—and learn how to customize them.

Requesting Access

Request access for yourself or others at your college to edit your website.

Merge Requests

Create a merge request for pushing code to your website.

Local Development

Make local code changes on your website and push them into production.

Header and Footer

Edit the menus found in the header and footer regions of your website.

Menus

Find and edit the various menus on your website—including the main nav and in-page sidebars.

Templates

Explore HTML code snippets that can be added to your website for custom formatting.

Image Sizes

Get image sizes for all visual elements on the framework.
